## Creating Bevel Buttons - Paint Shop Pro (PSP) 7 Tutorial

Here is my tutorial on how to create beveled buttons. You can see these on Microsofts website, and in some skins Windows. Very cool for your web page. This tutorial was written for Paint Shop Pro (PSP), but can probably be us for other versions as well.

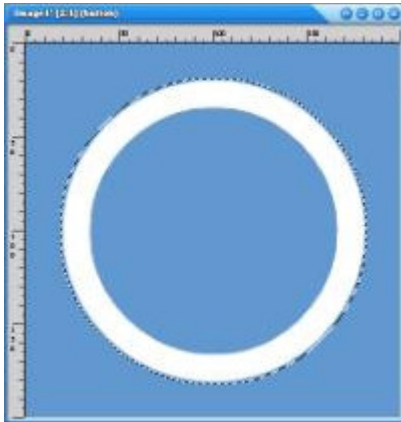

1

Create a new image , 200x200 with a light blue background (#6598CB). Now create a new raster layer , and name it button. T using the circle selection tool  create a circle, starting in the middle the canvas.

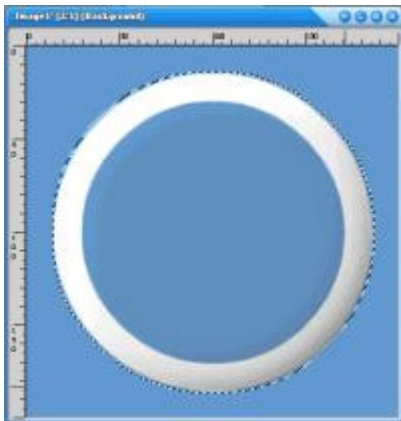

2

With the selection still active, click on the flood fill , and fill the selection with white. Then contract the selection by going to Selection Modify | Contract , and enter 15. Press Delete, or fill this selection the same light blue you used before(#6598CB). Finally, get your origin

selection by going to Selections | Modify | Expand , and entering 1. You should have a white ring that looks like mine.

3

Now is the hard part. With the selections still active, add an inner bevel  with [these settings](#).

4

Next, make a new raster layer, and name it "drop shadow". With the selection still active, go to Effects | 3D Effects | Drop Shadow , and [enter these settings](#).

5

You're done! Now you can add whatever text you want - and x, a >>, You can also resize them down to add to your site, I would do about 120 pixels wide. Good Luck. If you have any questions, [Contact Me](#)
