Grids - Paint Shop Pro (PSP) 7 Tutorial

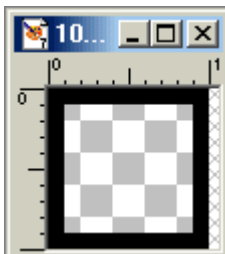

In this tutorial, you will learn how to add a grid to any image you want. This tutorial was written for Paint Shop Pro (PSP), but can probably be used for other versions as well.

1

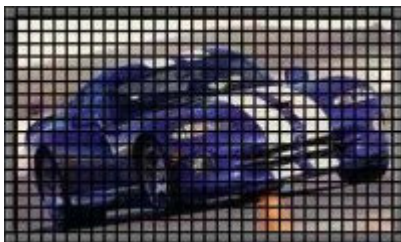

I will show you how to add grids to an image. First start out with the image you would like to add a grid to.

2

Now, make a new image  that is 10 pixels by 10 pixels with a transparent background. You can actually make the image any size. example: make a 30 by 30 pixel image if you want the grids to be 30 pixels large. With the paint brush  size as "1" draw a black border around the outside.

3

The next step is to make a new raster layer  by going to Layers->New Raster Layer, and label this layer "grid". Now select the gradient tool  and set the fill to a pattern fill . Have the pattern be the grid you just made.

4

The last step is to lighten the grid by adjusting the opacity of the grid layer. Slide the slider to the left in the layers palette. You have now created the grid effect. You can change the grid size by changing the size of the new image. This is the same grid effect I used in my logo at my homepage.
